So our main goal was basically helping these kids for a better educational life

Goal Of Our Project

- Enrich these poor/orphanns with wider choices for education
- Where we added carpets to their classrooms and library in addition to new wallpaper
- Planting Trees

In Short Essay

- Our main point was to try and re-establish the school step by step where we started first by participating in exhibitions to collect money to work on our project without any support so although we collected a few money but we did a lot where we planted trees , rebuilt classrooms from paint and carpet not to forget the clothes that were distrubited to each child

Background of Ghor Al Safi

Ghor Al Safi is known for being the poorest area in Jordan with very low education faculties .

And as for the school it is a school for poor orphans
Within the age of 5-11 where they are facing problems
With having no carpet to sit on in addition to the dark
Wallpaper colors that we re-painted brighter

Issue

So we tried to fix this educational issue as much as we can and will be helping these kids in need each year and never forgetting them , Ghor Al Safi needs support from people to help these kids that have many few faculties if not none so we are solving one of the major problems they are facing

So as i mentioned above we bought
carpet and paint by our own work
and money

In addition to the trees

Clothes for the kids

More books and stationary for the
library

Importance of our project

Do

- ✓ Enrich these kids with a higher educational level
- ✓ Having a safe classroom for those children
- ✓ Trees around the school for making a more environmental look .

Future

In the future we will continue the project with adding plasma tvs which are similiar to smart boards but with a DVD that has educational CD's to try and give also a higher level of education for these Poor people in Jordan
